

“A huge Chinese rocket will fall to earth this weekend!” This news was reported over and over the first week of May 2021.

“I’m not worried too much,” said Mathy Kathy.

“But it weighs up to 23 tons!” her friend replied. “That could kill a lot of people!”

“Still not worried,” said Mathy Kathy. “About 71% of the earth surface is covered by water and only 50-70% of the land is inhabited by human beings.”

What is the likelihood of the rocket debris hitting a populated area?
