

These photos were taken on the coldest day of 2021!
What are these objects, and explain why you think so.

Solution

- Soap bubbles blown on a brick pathway January, 2021.
- The air temp was so low, the water in the bubble mixture froze.
- Notice very small bubbles to the left of the larger bubbles on the second picture.
- Note the ice crystals on the surface of the bubble in the first picture.
- Search the internet for more pictures of frozen bubbles, just because they are so cool!!
