

- Where was this picture of the eagle **NOT** taken? Use clues to determine where this picture would not likely have been taken.
- Explain your answers.

These pictures were taken in the afternoon of July 28, 2023, 10 miles west of Tacoma Narrows near Seattle, Washington.

Considered one of the best places to see eagles, Narrows Park has 36 acres of mature forest plus a saltwater beach.

Students need to be able to defend their answers. They need to not just explain why something **is** but also be able to tell why something **isn't**.

Eagles would not be expected in: Hawaii, Antarctica, dense urban areas, deep ocean environments, arid deserts.

If students defend their answers well, accept some silly answers: the moon, my garage, the school gym, Saturn.

Eagles prefer undisturbed open spaces near large lakes or reservoirs, access to food (prey), suitable nesting sites such as trees or cliffs, and elevated locations.
